## SUMMARY

Systems-focused software engineer. I design APIs, data models and the interfaces on top of them, build end to end on the stack that fits, and keep what I ship running in production. Ranked first in my Software Engineering diploma cohort (90.36%).

## EXPERIENCE

**Full-Stack Software Engineer** — Qader
E-Learning Platform — 2025 - Present

- Build REST APIs in Django and DRF, with live features over WebSockets and slow jobs on Celery workers.
- Develop the Next.js and TypeScript web app, in Arabic and English.
- Ship through Docker, Nginx and GitHub Actions CI, and monitor production with Prometheus and Grafana.

**Full-Stack Developer** — Khamsat
Freelance — Aug 2024 - Present

- Build and deploy full-stack web apps for clients: e-commerce stores, learning management systems and company websites.
- Pick the stack per project, mostly Django (DRF) and Next.js, and design the REST APIs and databases behind each one.
- Run deployment end to end on VPS servers, from server setup to production release.

## PROJECTS

**Mizan: Household Budget App** — Website Link
Technologies Used: Next.js, TypeScript, Hono, Supabase (PostgreSQL), Drizzle, Gemini and Groq APIs, Telegram Bot API

- Budget app: a family logs spending on Telegram by text, voice or receipt photo, and sees what it can spend today.
- Parses common entries in code before any AI call and falls back across AI providers; 102 test files run in CI on every push.

**Max CLI: Terminal Assistant** — Project Link
Technologies Used: Python, Typer, Textual, FFmpeg, OpenAI SDK, Pytest, GitHub Actions, PyPI

- Open-source CLI on PyPI (v1.2): 73 commands for media, PDF, image and file tasks, plus an AI agent and a dashboard.
- Added an undo log for file operations, and CI across 3 operating systems and 4 Python versions with a type-check gate.

**NanoManga Studio: AI Manga Creation (Hackathon)** — Website Link | Project Link
Technologies Used: Next.js, TypeScript, Tailwind CSS, Shadcn/ui, Google Gemini API (text and image models)

- Built for Google's Nano Banana hackathon: turns a one-line idea into finished, downloadable manga pages.
- Kept characters consistent by sending earlier pages and character sheets back to the image model with each new page.

**School Management System** — Project Link
Technologies Used: C#, Windows Forms, Oracle Database, SQL

- Desktop app for school records across 24 forms: students, staff, classes, grades and weekly schedules.
- Routed every query through one database gateway with parameterized SQL, so no form opens its own connection.

## EDUCATION

**Aleppo University**, B.Sc. Information Technology Engineering — Dec 2023 - Present
**Syrian Virtual University**, B.Sc. Information Technology Engineering — Oct 2021 - Present
**Software Engineering Diploma**, ranked 1st in cohort (90.36%) — Sep 2021 - Jun 2023

## CERTIFICATIONS

**Meta:** Android Developer 2026 · Database Engineer 2025 · Back-End Developer 2025 · Front-End Developer 2024
**Other:** Odoo Developer, EBTECH 2024 · Django for Everybody, University of Michigan 2024

## TECHNICAL SKILLS

**Front-End:** Next.js, React, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, Zustand, TanStack Query, Redux Toolkit, Zod
**Back-End:** Python, Django, DRF, Node.js, Express, Hono, ASP.NET Core, OpenAPI, Celery, BullMQ, WebSockets
**Databases:** PostgreSQL, Supabase, MySQL, SQL Server, Oracle, SQLite, Redis, Drizzle ORM, Prisma
**DevOps & Testing:** Docker, GitHub Actions CI/CD, Linux, Nginx, VPS, Netlify, Vercel, Sentry, Pytest, Vitest, Jest
**AI & Mobile:** OpenAI SDK, Gemini API, Vercel AI SDK, Telegram Bot API, Kotlin, Jetpack Compose
**Languages:** Arabic (native), English (C1)
